

Microservices, APIs and the Autonomous Web

An aerial photograph of a city, likely Rio de Janeiro, featuring a large, modern cable-stayed bridge with a white pylon and numerous yellow cables. The bridge spans a river. In the background, there are dense residential buildings and greenery. The sky is overcast.

EBOOK

COMPLIMENTARY O'REILLY BOOK: SECURING MICROSERVICE APIS

40+ PAGES OF PRACTICAL GUIDANCE FOR SUSTAINABLE AND
SCALABLE ACCESS CONTROL

[READ MORE](#)

Microservice Architecture: Aligning Principles, Practices, and Culture

Microservices is the next evolution in software architecture designed to help organizations embrace continual change in the digital economy. But how do you design and apply an effective microservice architecture?

This new book from O'Reilly provides comprehensive guidance through seven valuable chapters that give you a deep-dive into:

- The benefits and principles of microservices
- A design-based approach to microservice architecture
- Lessons for applying microservices in practice

A Look Ahead

- Programming the Network
- Microservices
- APIs
- Autonomy
- The Next Big Thing

A Force to Reckon With

2000

"REST emphasizes scalability of component interactions, generality of interfaces, independent deployment of components, and intermediary components."

-- Roy Fielding, 2000

The image features the Salesforce logo, which consists of a blue cloud shape with the word "salesforce" written in white lowercase letters inside it. The background is a solid dark grey.

HTML: Solutions

"HTML is the standard markup language for creating web pages and web applications. "

-- Wikipedia

Robert Cailliau

Three Levels of System Design

Three Levels of System Design

- Functionality
- Intentionality
- Autonomy

func·tion·al·i·ty

/,fəNG(k)SHəhələdē/ 

noun

1. the quality of being suited to serve a purpose well; practicality.
"I like the feel and functionality of this bakeware"

Functionality : Microservices

*Loosely-coupled components
running in a
Resilient, engineered system*

Functionality : Microservices

“Bugs will happen. They cannot be eliminated, so they must be survived instead.”

-- Michael T. Nygard

 BETA

Nygard Stability Patterns

- **Timeout**
- **Circuit Breaker**
- **Bulkhead**
- **Steady State**
- **Fail Fast**
- **Handshaking**

- **Caching** : A capacity pattern referenced here, too

in·ten·tion·al·i·ty

/inˌtɛn(t)ʃəˈnələdē/ 

noun

the fact of being deliberate or purposive.

- PHILOSOPHY

the quality of mental states (e.g., thoughts, beliefs, desires, hopes) that consists in their being directed toward some object or state of affairs.

API

abbreviation

1. application programming interface

APIs allow us to unlock hidden business value

- Create New Applications
- Identify New Revenue Streams
- Initiate New Businesses

"The sign of a well-designed object is when people who use it can do things with it that the designer never imagined."

-- Donald Norman

A photograph of a forest path made of logs, with the text "Good APIs make interaction easy" overlaid in white. The path is a winding line of cut logs laid on the forest floor, leading through a dense stand of tall, thin trees. The ground is covered in fallen leaves and some green moss. The lighting is soft, suggesting a shaded forest environment.

Good APIs make interaction easy

au·ton·o·my

/ô-tän-ə-mē/ 

noun

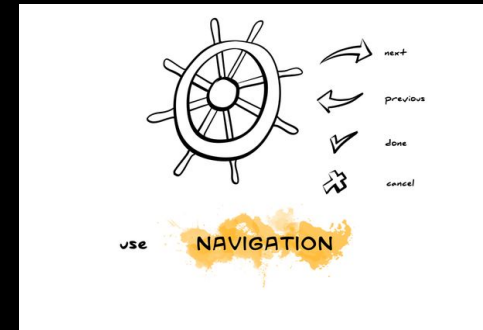

- freedom from external control or influence; independence.
"economic autonomy is still a long way off for many women"
synonyms: self-government, self-rule, home rule, self-determination, independence, sovereignty, freedom
"the rebels called for regional autonomy and self-government"

Patterns for Autonomous APIs

Four Design Patterns

Four Basic Principles

Four Shared Agreements

}
```

use

RELATED

Use Related

What problem does this solve?

Machines can now “look up”
the available affordances.

next

previous

done

cancel

use

NAVIGATION

Use Navigation

Services SHOULD provide "next/previous" LINK to handle multi-step workflow with "cancel", "restart", & "done."

```
// evaluate options
var lookingFor = "next";
var msg = getCurrentResponseBody();
switch (lookingFor) {
  case "done":
    if(msg.findNavigation(lookingFor)) {
      processDone(msg);
    }
    break;
  case "cancel":
    if(msg.findNavigation(lookingFor)) {
      processCancel(msg);
    }
    break;
  case "restart":
    if(msg.findNavigation("restart")) {
      processRestart(msg);
    }
    break;
  case "previous":
    if(msg.findNavigation("previous")) {
      processPrevious(msg);
    }
    break;
  case "next":
    if(msg.findNavigation("next")) {
      processNext(msg);
    }

```

Use Navigation

What problem does this solve?

Machines can now navigate through a long series of steps safely.

PARTIAL SUBMIT

**PARTIAL
SUBMIT**

Partial Submit

Services SHOULD accept partially filled-in FORM and return a new FORM with the remaining fields.

```
// partial submit processing
...
case "POST":
    neededInputs = processForm(suppliedInputs);
    if(neededInputs.length>0) {
        responseBody = generateForm(
            neededInputs,
            actions["done","cancel","restart","previous"]
        );
    }
    else {
        responseBody = generateResults();
    }
    break
...

```

PARTIAL SUBMIT

Partial Submit

What problem does this solve?

Machines can now interact in small parts and not always be perfect.

STATE WATCH

SIGNAL

- Keep at set point
- Use deviation as error signal
- Track continuously

SIGN

Stereotype acts

If	If C, ok
Valve	If D, adjust flow
Open	
If	If A, ok
Valve	If B, recalibrate
Closed	meter

SYMBOL

If, after calibration, is still B, begin to read meter and speculate functionally (could be a leak)

STATE
WATCH

State Watch

Services SHOULD allow clients to subscribe to WATCH VALUES so that clients can determine "done."

```
*** REQUEST
POST /heat-mgmt HTTP/1.1
  Host: example.org
  Content-Type: application/x-www-form-urlencoded
  Accept: application/vnd.collection+json
  Prefer: state-watch="sensor5,temp13"

  sensor5=increase by .5c;

*** RESPONSE
HTTP/1.1 200 OK
  Content-Type: application/collection+json
  Preference-Applied: state-watch="sensor5,sensor13"
  Content-Location: /heat-mgmt

{"collection" :
  {
    "items" : [
      ...
      {
        "href" : "/heat-mgmt/sensor5",
        data: [
          {"name" : "device", "value" : "sensor5"},
          {"name" : "reading", "value" : "14.5c"}
        ]
      }
      ...
    ]
  }
}
```

STATE WATCH

Use State Watch

What problem does this solve?

Machines can now set their own goals and act accordingly.

Monetizing the Future

API Imperative: From IT Concern to Business Mandate

Because they allow technology assets to be reused across and beyond the enterprise, APIs are becoming a strategic business imperative.

For many years, **APIs** have made it possible for solutions and systems to communicate with each other. Increasingly, companies value these often-overlooked technologies for another capability: They expose technology assets for

Closed System Focus

- Focus on what/who you can control
- Create APIs that express your business
- Build apps that understand your APIs (business)
- Collect Customers and Profits

Most companies are focused on monetizing their own APIs

Open System Focus

- Focus on what you can offer
- Create APIs that express your intentionality
- Build apps that have autonomy
- Collect Customers and Profits

The next companies will focus on monetizing other people's APIs

salesforce

So...

Looking to the Future...

- Focus on Programming the Network
- Microservices for Functionality
- APIs for Intentionality
- Patterns for Autonomy
- Aim to Monetize Other People's APIs

Focus on programming the network

Build Microservices for Functionality

*Loosely-coupled components
running in a
Resilient, engineered system*

Create APIs for Intentionality

A photograph of a forest path. The path is made of dirt and is lined with tall, thin trees. In the foreground, a large, thick log lies horizontally across the path. The ground is covered with fallen leaves and twigs. The lighting is soft, suggesting a shaded forest environment.

**Good APIs make
interaction easy**

Apply Patterns for Autonomy

Aim to monetize other people's APIs

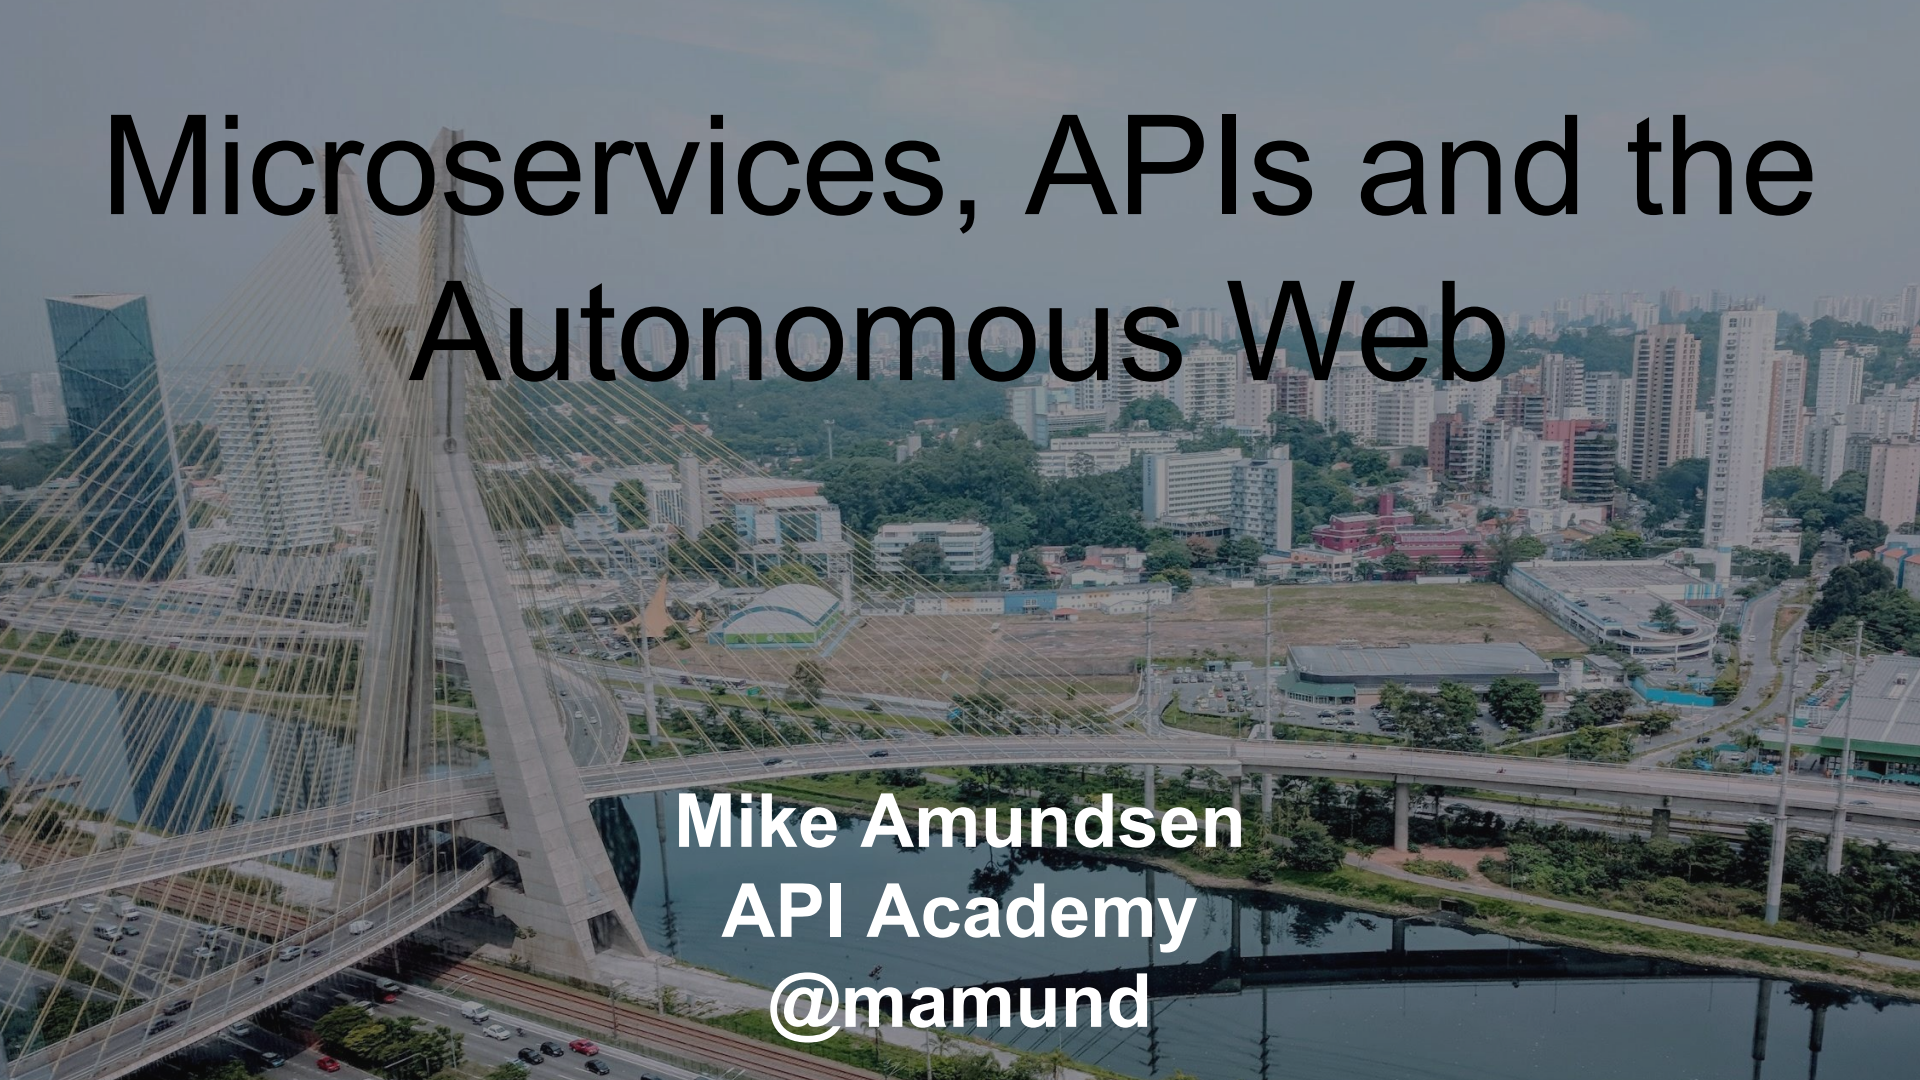

There's lots of opportunity ahead of us...

*"The Web as I envisaged it,
we have not seen it yet. The
future is still so much bigger
than the past."*

-- Tim Berners-Lee

Microservices, APIs and the Autonomous Web

An aerial photograph of a city, likely Rio de Janeiro, featuring a prominent cable-stayed bridge with a tall, white, A-shaped pylon and numerous yellow cables. The bridge spans a river. In the background, there are dense residential buildings and greenery. The sky is overcast.
